sinica.edu.tw

Academia Sinica - Research Findings | Earth's mantle locally heats up our planet's core

Jun 17

Space Daily

Earth's inner core is an iron-rich ball as hot as the surface of the Sun, kept solid only because the crushing pressure of the entire planet raises the temperature at which iron can melt

3 days ago

Space Daily

The Earth's inner core grows by roughly a millimetre a year as molten iron freezes onto it, and that slow crystallisation releases the energy that stirs the outer core and keeps the planet's magnetic field alive
